RULE 1 : If Marked Price = (MP)

Selling Price = (SP)

Then, Discount = MP - SP and

$$\text{Discount\%} = \frac{\text{Discount}}{\text{MP}} \times 100$$

$$\text{Discount\%} = \frac{\text{Marked Price} - \text{Selling Price}}{\text{Marked Price}} \times 100$$

Note: Any kind of Discount is calculated only on marked price and not on selling price or cost price.

RULE 2 : If article is sold on D% discount, then

$$\text{SP} = \frac{\text{MP}(100 - D)}{100},$$

$$\text{MP} = \frac{\text{SP} \times 100}{100 - D}$$

RULE 3 : When successive Discounts D_1, D_2, D_3 , so on, are given then

$$\text{SP} = \text{MP} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right) \left(\frac{100 - D_3}{100} \right)$$

RULE 4 : If D_1, D_2, D_3 are successive discounts, then equivalent discount/overall discount is (in percentage)

$$100 - \left[\left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right) \left(\frac{100 - D_3}{100} \right) \times 100 \right]$$

RULE 5 : (Special Case) : When two successive discounts are given, then overall discount is

$$= \left(D_1 + D_2 - \frac{D_1 D_2}{100} \right) \%$$

RULE 6 : If r% of profit or loss occur after giving D%

discount on marked price, then $\frac{\text{MP}}{\text{CP}} = \frac{100 \pm r}{100 - D}$

(positive sign for profit and negative for loss)

RULE 7 : 'y' articles (quantity/number) are given free

on purchasing 'x' articles. Then, $\text{Discount\%} = \frac{y \times 100}{x + y}$

RULE 8 : A tradesman marks his goods r% above his cost price. If he allows his customers a discount of $r_1\%$ on the marked price. Then is profit or loss per cent is

$$\frac{r \times (100 - r_1)}{100} - r_1$$

(Positive sign signifies profit and negative sign signifies loss).

RULE 9 : The marked price of an article is fixed in such a way that after allowing a discount of r% a profit of R% is obtained. Then the marked price of the article is

$$\left(\frac{r + R}{100 - r} \times 100 \right) \% \text{ more than its cost price.}$$

EXPLANATIONS

TYPE-I

1. (2) Using Rule 5,
Successive discounts of 36% and 4% is overall equals to

$$= \left(36 + 4 - \frac{36 \times 4}{100} \right) \%$$

$$= 38.56\%$$

$$\therefore \text{Percentage difference} = 40 - 38.56$$

$$= 1.44\%$$

$$\text{Difference between discount} \\ = 1.44\% \text{ of } 100000$$

$$= \frac{1.44 \times 100000}{100} = ₹ 1440$$

2. (4) Using Rule 5,
Equivalent discount

$$= 30 + 10 - \frac{30 \times 10}{100} = 37\%$$

3. (3) Marked price = ₹ 720
Actual price = ₹ 550.80
First discount = 10%
Let the second discount be x%
Then, we can write
 $720(1 - 0.10)(1 - 0.01x) = 550.80$
 $\Rightarrow 720 \times 0.9(1 - 0.01x) = 550.8$
 $\Rightarrow 648(1 - 0.01x) = 550.8$

$$\Rightarrow 1 - 0.01x = \frac{550.8}{648}$$

$$0.01x = 1 - \frac{550.8}{648}$$

$$x = \frac{1 - 0.85}{0.01}$$

$$x = 0.15 \times 100$$

$$x = 15$$

$$\therefore \text{Second discount} = 15\%$$

4. (2) Price after 10% first discount

$$= 1000 \times \frac{100 - 10}{100}$$

$$= 1000 \times \frac{90}{100} = ₹ 900$$

Given :

$$\text{Price after second discount} \\ = ₹ 810$$

$$\therefore \text{Second discount}$$

$$= 900 - 810 = ₹ 90$$

$$\therefore \text{Percentage of second discount}$$

$$= \frac{90 \times 100}{900} = 10\%$$

5. (3) Using Rule 5,
Successive discounts of x% and y%

$$= \left(x + y - \frac{x \times y}{100} \right) \%$$

$$\therefore \text{Required discount}$$

$$= \left(20 + 10 - \frac{20 \times 10}{100} \right) \%$$

$$= 30 - 2 = 28\%$$

6. (3) **Trick :**

$$\text{Equivalent discount}$$

$$= \left(15 + 10 - \frac{15 \times 10}{100} \right) \% = 23.5\%$$

7. (3) Equivalent discount of successive discounts of 20% and 10%

$$= \left(20 + 10 - \frac{20 \times 10}{100} \right) \% = 28\%$$

$$\therefore \text{Selling Price} = (100 - 28) \% \\ \text{of ₹ 500} = 72 \% \text{ of } 500$$

$$= ₹ \frac{500 \times 72}{100} = ₹ 360$$

Aliter : Using Rule 3,

$$\text{M.P.} = \text{Rs. } 500$$

$$D_1 = 20\%$$

$$D_2 = 10\%$$

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$= 500 \left(\frac{100 - 20}{100} \right) \left(\frac{100 - 10}{100} \right)$$

$$= 500 \times \frac{80}{100} \times \frac{90}{100} = \text{Rs. } 360$$

8. (1) A single discount equal to the two successive discounts

$$= \left(10 + 5 - \frac{10 \times 5}{100} \right) \% = 14.5\%$$

$$\therefore \text{Selling price of the article} \\ = 85.5\% \text{ of ₹ 240}$$

$$= ₹ \frac{85.5 \times 240}{100} = ₹ 205.20$$

Aliter : Using Rule 3,

$$\text{Here, M.P.} = \text{Rs. } 240,$$

$$D_1 = 10\%, D_2 = 5\%$$

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$= 240 \left(\frac{100 - 10}{100} \right) \left(\frac{100 - 5}{100} \right)$$

$$= 240 \times \frac{90}{100} \times \frac{95}{100}$$

$$= \text{Rs. } 205.20$$

9. (2) Using Rule 5,
Let the original price be ₹ 100
 \therefore Increased price = ₹ 130
Equivalent discount

$$= \left(10 + 10 - \frac{10 \times 10}{100} \right) = 19\%$$

$$\therefore \text{Ultimate price of the article} = \\ 81\% \text{ of } 130 = 105.3 \text{ i.e. increase by } 5.3\%.$$

10. (3) Single of discount for successive discounts 10% and 20%

$$= \left(20 + 10 - \frac{20 \times 10}{100} \right) \% = 28\%$$

$$\therefore \text{Equivalent discount for discounts } 28\% \text{ and } 25\%$$

$$= \left(28 + 25 - \frac{28 \times 25}{100} \right) \%$$

$$= 53 - 7 = 46\%$$

Aliter : Using Rule 4,

Single equivalent discount

$$= 100 - \left[\left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right) \left(\frac{100 - D_3}{100} \right) \times 100 \right]$$

$$= 100 - \left[\left(\frac{100 - 10}{100} \right) \left(\frac{100 - 20}{100} \right) \left(\frac{100 - 25}{100} \right) \times 100 \right]$$

$$= 100 - \frac{90}{100} \times \frac{80}{100} \times \frac{75}{100} \times 100$$

$$= 100 - 54 = 46\%$$

11. (3) Equivalent discount for successive discounts of 20% and 10%

$$= \left[20 + 10 - \frac{20 \times 10}{100} \right] \%$$

$$= 28\%$$

$$\therefore \text{Net selling price} = 72\% \text{ of } 2000$$

$$= ₹ \frac{72 \times 2000}{100} = ₹ 1440$$

Aliter : Using Rule 3,

$$\text{Here, M.P.} = ₹ 2000,$$

$$D_1 = 20\%, D_2 = 10\%$$

$$\text{S.P.} = \text{M.P.} \left[\left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right) \right]$$

$$= \left[2000 \times \left(\frac{100 - 20}{100} \right) \times \left(\frac{100 - 10}{100} \right) \right]$$

$$= 2000 \times \frac{80 \times 90}{10000} = ₹ 1440$$

DISCOUNT

12. (2) Using Rule 5,

Case I : A single discount of 30%

Case II : Two successive discounts of 20% and 10%

Single equivalent discount

$$= (20 + 10 - \frac{20 \times 10}{100}) \% = 28\%$$

$$\text{Difference} = (30 - 28)\% = 2\%$$

\therefore Required difference

$$= 2\% \text{ of } 550$$

$$= ₹ \frac{2 \times 550}{100} = ₹ 11.$$

13. (3) Let the second discount be $x\%$.

Then, 90 % of $(100 - x)\%$ of 800

= 612

$$\Rightarrow \frac{90}{100} \times \frac{100 - x}{100} \times 800 = 612$$

$$\Rightarrow 100 - x = \frac{612 \times 100}{90 \times 8} = 85$$

$$\Rightarrow x = 100 - 85 = 15\%$$

Aliter : Using Rule 3,

Here, M.P. = Rs. 800, S.P. = Rs.

612, $D_1 = 10\%$, $D_2 = ?$

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$612 = 800 \times \left(\frac{100 - 10}{100} \right) \times \left(\frac{100 - D_2}{100} \right)$$

$$612 = 800 \times \frac{90}{100} \times \frac{100 - D_2}{100}$$

$$\frac{6120}{72} = 100 - D_2$$

$$D_2 = \frac{100 - 6120}{72}$$

$$= \frac{7200 - 6120}{72} = 15\%$$

14. (3) Let 'x' be the marked price

Single Discount = 15%

$$\Rightarrow 100 - 15 = 85$$

$$85\% \text{ of } x = 17,000$$

$$\therefore x = \frac{17,000}{85} \times 100$$

$$= ₹ 20,000$$

Required SP

$$= 20,000 \times \frac{95}{100} \times \frac{90}{100}$$

$$= 180 \times 95 = ₹ 17100$$

Aliter : Using Rule 2 and Rule 3,

$$\text{M.P.} = \frac{\text{S.P.} \times 100}{100 - D}$$

$$= \frac{17000 \times 100}{100 - 15}$$

$$= \frac{17000 \times 100}{85}$$

$$\text{M.P.} = 20000$$

Also, S.P.

$$= \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$= 20000 \left(\frac{100 - 5}{100} \right) \left(\frac{100 - 10}{100} \right)$$

$$= 20000 \times \frac{95}{100} \times \frac{90}{100}$$

$$= 180 \times 95 = ₹ 17100$$

15. (3) Marked price = ₹ 160

After 10% discount

$$\text{S.P.} = \frac{90}{100} \times 160 = ₹ 144$$

Let other discount = $x\%$

$$\therefore \frac{(100 - x)}{100} \times 144 = ₹ 122.40$$

$$\Rightarrow 100 - x = \frac{12240}{144}$$

$$\Rightarrow 100 - x = 85$$

$$\Rightarrow x = 100 - 85 = 15\%$$

Aliter : Using Rule 3,

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$122.40 = 160 \left(\frac{100 - 10}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$\frac{1224000}{160} = 90 \times \left(\frac{100 - D_2}{100} \right)$$

$$\frac{1224000}{160 \times 90} = 100 - D_2$$

$$85 = 100 - D_2$$

$$\Rightarrow D_2 = 15\%$$

16. (4) Let the second discount be x per cent.

According to the question,

$$450 \times \frac{100 - 10}{100} \times \frac{100 - x}{100}$$

$$= 344.25$$

$$\therefore 100 - x$$

$$= \frac{344.25 \times 100 \times 100}{450 \times 90}$$

$$\therefore 100 - x = 85$$

$$\therefore x = 100 - 85 = 15\%.$$

Aliter : Using Rule 3,

Here, M.P. = Rs. 450, S.P.

= Rs. 344.25, $D_1 = 10\%$, $D_2 = ?$

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$344.25 = 450 \times \left(\frac{100 - 10}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$\frac{3442500}{450 \times 90} = (100 - D_2)$$

$$85 = 100 - D_2$$

$$\Rightarrow D_2 = 15\%$$

17. (3) Using Rule 5,

(i) : Equivalent discount

$$= \left(25 + 15 - \frac{25 \times 15}{100} \right) \%$$

$$= (40 - 3.75) \% = 36.25\%$$

(ii) : Equivalent discount

$$= \left(30 + 10 - \frac{30 \times 10}{100} \right) \%$$

$$= (40 - 3) \% = 37\%$$

(iii) : Equivalent discount

$$= \left(35 + 5 - \frac{35 \times 5}{100} \right) \%$$

$$= (40 - 1.75) \% = 38.25\%$$

Clearly, third offer is best for a customer.

18. (2) Using Rule 5,

Equivalent discount for two successive discounts of 8% and 8%

$$= \left(8 + 8 - \frac{8 \times 8}{100} \right) \%$$

$$= (16 - 0.64) \% = 15.36 \%$$

$$\therefore \text{SP} = (100 - 15.36) \% \text{ of } 900$$

$$= ₹ \left(\frac{84.64 \times 900}{100} \right) = ₹ 761.76$$

For a single discount of 16%,

SP = 84% of 900

$$= ₹ \left(\frac{84 \times 900}{100} \right) = ₹ 756$$

Certainly seller will lose in this case.

$$\therefore \text{Loss} = ₹ (761.76 - 756)$$

$$= ₹ 5.76$$

19. (3) Equivalent discount

$$= 10 + 5 - \frac{10 \times 5}{100} = 14.5 \%$$

\therefore CP (for buyer)

$$= 85.5\% \text{ of } ₹ 200000$$

DISCOUNT

$$= ₹ \left(\frac{85.5 \times 200000}{100} \right) = ₹ 171000$$

$$SP = ₹ 179550$$

$$\text{Gain} = ₹ (179550 - 171000)$$

$$= ₹ 8550$$

$$\therefore \text{Gain \%}$$

$$= \frac{8550}{171000} \times 100 = 5\%$$

Aliter : Using Rule 3,

Here, M.P. = 200000, S.P. is C.P. byer for

$$D_1 = 5\%,$$

$$D_2 = 10\%$$

$$S.P. = M.P. \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$= 200000 \left(\frac{100 - 5}{100} \right) \left(\frac{100 - 10}{100} \right)$$

$$= 20 \times 95 \times 90$$

$$\text{C.P. for buyer} = 171000$$

$$S.P. = 179550$$

$$\text{Profit} = S.P. - \frac{C.P.}{C.P.} \times 100\%$$

$$= \frac{8550}{171000} \times 100 = 5\%$$

20. (4) Using Rule 5,

Effective discount

$$= 25 + 15 - \frac{25 \times 15}{100}$$

$$= 40 - 3.75 = 36.25 \%$$

$$\therefore \text{CP for buyer}$$

$$= (100 - 36.25) \% \text{ of } 800$$

$$= \frac{63.75 \times 800}{100} = ₹ 510$$

$$\therefore \text{To gain } 20\%,$$

$$SP = ₹ \left(\frac{120 \times 510}{100} \right) = ₹ 612$$

$$\text{Let the list price be } ₹ x.$$

$$\therefore 90\% \text{ of } x = ₹ 612$$

$$\Rightarrow \frac{90x}{100} = 612 \Rightarrow x = \frac{61200}{90}$$

$$= ₹ 680$$

21. (4) Using Rule 5,

Single equivalent discount of two successive discounts of 36% and

$$4\% = 36 + 4 - \frac{36 \times 4}{100}$$

$$= 40 - 1.44 = 38.56$$

$$\text{Percentage difference}$$

$$= 40 - 38.56 = 1.44$$

$$\therefore \text{Required difference}$$

$$= 500 \times \frac{1.44}{100} = ₹ 7.20$$

22. (2) Total discount

$$= ₹ (920 - 742.90)$$

$$= ₹ 177.10$$

$$\text{First discount} = 15\%$$

$$\therefore \text{Discount} = 15\% \text{ of } 920$$

$$= \frac{920 \times 15}{100} = ₹ 138$$

$$\text{Price after this discount}$$

$$= 920 - 138 = ₹ 782$$

$$\text{Remaining discount}$$

$$= 177.10 - 138 = ₹ 39.10$$

$$\text{Let the second discount be } x \%$$

$$\therefore \frac{782 \times x}{100} = 39.10$$

$$\Rightarrow x = \frac{39.10 \times 100}{782} = 5\%$$

Aliter : Using Rule 3,

Here, M.P. = Rs. 920, S.P. = Rs. 742.90

$$D_1 = 15\%, D_2 = ?$$

$$S.P. = M.P. \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$742.90$$

$$= 920 \left(\frac{100 - 15}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$\frac{7429000}{920 \times 85} = 100 - D_2$$

$$95 = 100 - D_2$$

$$\Rightarrow D_2 = 5\%$$

23. (3) Total discount

$$= ₹ (820 - 570.72) = ₹ 249.28$$

$$\text{First discount} = 820 \times \frac{20}{100} = ₹ 164$$

$$\therefore \text{Second discount}$$

$$= ₹ (249.28 - 164) = ₹ 85.28$$

$$\text{Price of the article after first discount} = ₹ (820 - 164) = ₹ 656$$

$$\text{If the second discount be } x\% , \text{ then}$$

$$x\% \text{ of } 656 = 85.28$$

$$\Rightarrow x = \frac{85.28 \times 100}{656} = 13\%$$

Aliter : Using Rule 3,

Here, M.P. = Rs. 820, S.P. = 570.72, $D_1 = 20\%$, $D_2 = ?$

$$S.P. = M.P. \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$570.72 = 820 \left(\frac{100 - 20}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$\frac{5707200}{820 \times 80} = 100 - D_2$$

$$100 - D_2 = 87$$

$$D_2 = 13\%$$

24. (1) Using Rule 5,

Single equivalent discount for two successive discounts of 20% and 10%

$$= \left(20 + 10 - \frac{20 \times 10}{100} \right) \% = 28\%$$

Now, single discount for 28% and

$$5\% = \left(28 + 5 - \frac{28 \times 5}{100} \right) \%$$

$$= (33 - 1.4) \% = 31.6\%$$

\therefore Required selling price of bicycle at cash payment

$$= (100 - 31.6) \% \text{ of } ₹ 2000$$

$$= \frac{2000 \times 68.4}{100} = ₹ 1368$$

25. (1) Using Rule 5,

Single equivalent discount of two consecutive discount of 30% and 10%

$$= 30 + 10 - \frac{30 \times 10}{100} = 37\%$$

\therefore Required difference = 40% of

$$500 - 37\% \text{ of } 500$$

$$= 3\% \text{ of } 500$$

$$= 500 \times \frac{3}{100} = ₹ 15$$

26. (4) After a discount of 5%

$$SP = \frac{95 \times 16000}{100} = ₹ 15200$$

Let the second discount be $x\%$.

$$\therefore x\% \text{ of } 15200$$

$$= (15200 - 11400)$$

$$\Rightarrow \frac{x \times 15200}{100} = 3800$$

$$\Rightarrow x = \frac{3800 \times 100}{15200} = 25$$

$$\therefore \text{Second discount} = 25\%$$

Aliter : Using Rule 3,

Here, M.P. = 16000,

DISCOUNT

$$\text{S.P.} = 11400, D_1 = 5\%, D_2 = ?$$

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$11400 = 16000 \left(\frac{100 - 5}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$\frac{114000}{16 \times 95} = 100 - D_2$$

$$75 = 100 - D_2$$

$$D_2 = 25\%$$

27. (3) Using Rule 5,

Case I,

$$\text{Discount} = \frac{30 \times 2000}{100} = ₹ 600$$

Single equivalent discount for discounts of 25% and 5%.

$$= \left(25 + 5 - \frac{25 \times 5}{100} \right) \%$$

$$= (30 - 1.25) \% = 28.75\%$$

$$\therefore \text{Discount} = \frac{28.75 \times 2000}{100}$$

$$= ₹ 575$$

$$\therefore \text{Difference} = ₹ (600 - 575)$$

$$= ₹ 25$$

28. (1) Using Rule 5,

Let the marked price be ₹ x .

$$\therefore \text{In case I, SP} = ₹ \frac{70x}{100}$$

Single discount equivalent to successive discounts of 20% and 10%.

$$= \left(20 + 10 - \frac{20 \times 10}{100} \right) \% = 28\%$$

$$\therefore \text{S.P. in this case} = \frac{72x}{100}$$

$$\therefore \frac{72x}{100} - \frac{70x}{100} = 72$$

$$\Rightarrow \frac{2x}{100} = 72$$

$$\therefore x = \frac{72 \times 100}{2} = ₹ 3600$$

29. (2) Using Rule 5,

Single equivalent discount for successive discounts of 10% and 20%.

$$= \left(10 + 20 - \frac{20 \times 10}{100} \right) \% = 28\%$$

Single equivalent discount for 28% and 30%.

$$= \left(28 + 30 - \frac{28 \times 30}{100} \right) \% = 49.6\%$$

30. (3) Using Rule 5,

Equivalent single discount

$$= \left(20 + 20 - \frac{20 \times 20}{100} \right) \% = 36\%$$

31. (3) Using Rule 5,

Single equivalent discount

$$= \left(10 + 5 - \frac{10 \times 5}{100} \right) \%$$

$$= (15 - 0.5) \% = 14.5\%$$

32. (2) Using Rule 5,

Single equivalent discount

$$= \left(x + y - \frac{xy}{100} \right) \%$$

$$= \left(20 + 15 - \frac{20 \times 15}{100} \right) \% = 32\%$$

33. (2) Single equivalent discount for 10% and 12%.

$$= \left(12 + 10 - \frac{12 \times 10}{100} \right) \% = 20.8\%$$

Single equivalent discount for 20.8% and 5%.

$$= \left(20.8 + 5 - \frac{20.8 \times 5}{100} \right) \%$$

$$= 24.76\%$$

Aliter : Using Rule 4,

Here, $D_1 = 10\%$, $D_2 = 12\%$, $D_3 = 5\%$

Single equivalent discount

$$= 100 - \left[\left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right) \left(\frac{100 - D_3}{100} \right) \times 100 \right]$$

$$= 100 - \left[\left(\frac{100 - 10}{100} \right) \left(\frac{100 - 12}{100} \right) \left(\frac{100 - 5}{100} \right) \times 100 \right]$$

$$= 100 - \frac{90}{100} \times \frac{88}{100} \times \frac{95}{100} \times 100$$

$$= 100 - 75.24 = 24.76\%$$

34. (2) Using Rule 5 and Rule 2,

Single equivalent discount

$$= \left(5 + 10 - \frac{10 \times 5}{100} \right) \% = 14.5\%$$

\therefore Cost of article after discount

$$= \frac{850 \times (100 - 14.5)}{100} = ₹ 726.75$$

35. (3) Using Rule 5,

Single equivalent discount

$$= \left(15 + 10 - \frac{15 \times 10}{100} \right) \% = 23.5\%$$

$$\therefore \text{Cost price} = \frac{800 \times 76.5}{100}$$

$$= ₹ 612$$

$$\text{Actual C.P.} = ₹ (612 + 28)$$

$$= ₹ 640$$

$$\therefore \text{Gain \%} = \frac{800 - 640}{640} \times 100$$

$$= \frac{160 \times 100}{640} = 25\%$$

36. (2) Single equivalent discount for 10% and 20%

$$= 10 + 20 - \frac{20 \times 10}{100} = 28\%$$

Single equivalent discount for 28% and 40%

$$= \left(40 + 28 - \frac{28 \times 40}{100} \right) \%$$

$$= (68 - 11.2) \% = 56.8\%$$

Aliter : Using Rule 4,

Here, $D_1 = 10\%$, $D_2 = 20\%$, $D_3 = 40\%$

Single discount

$$= 100 - \left[\left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right) \left(\frac{100 - D_3}{100} \right) \times 100 \right]$$

$$= 100 - \left(\frac{100 - 10}{100} \right) \times \left(\frac{100 - 20}{100} \right) \times \left(\frac{100 - 40}{100} \right) \times 100$$

$$= 100 - \frac{90}{100} \times \frac{80}{100} \times \frac{60}{100} \times 100$$

$$= 100 - 43.20 = 56.8\%$$

37. (4) Using Rule 5,

Single equivalent discount

$$= \left(25 + 10 - \frac{25 \times 10}{100} \right) \%$$

$$= 32.5\%$$

38. (1) Using Rule 5,

Equivalent single discount

$$= \left(x + y - \frac{xy}{100} \right) \%$$

$$= \left(20 + 5 - \frac{20 \times 5}{100} \right) \%$$

$$= (25 - 1) \% = 24\%$$

DISCOUNT

39. (4) Using Rule 5,

Single equivalent discount of two successive discounts of 20% each

$$= \left(20 + 20 - \frac{20 \times 20}{100} \right) \%$$

$$= 36\%$$

If the amount of the bill be x , then

$$\therefore (36 - 35)\% \text{ of } x = 22$$

$$\Rightarrow \frac{x}{100} = 22 \Rightarrow x = ₹ 2200$$

40. (3) S.P. after first discount

$$= \frac{1600 \times 90}{100} = ₹ 1440$$

\therefore Second discount

$$= 1440 - 1224 = ₹ 216$$

$$\therefore \frac{1440 \times x}{100} = 216$$

$$\therefore x = \frac{216 \times 100}{1440} = 15\%$$

41. (3) Single equivalent discount for 20% and 20%

$$= \left(20 + 20 - \frac{20 \times 20}{100} \right) \% = 36\%$$

Single equivalent discount for 36% and 10%

$$= \left(36 + 10 - \frac{36 \times 10}{100} \right) \% = 42.4\%$$

Aliter : Using Rule 4,

$$= 100 - \left[\left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right) \left(\frac{100 - D_3}{100} \right) \times 100 \right]$$

$$= 100 - \left[\left(\frac{100 - 20}{100} \right) \times \left(\frac{100 - 20}{100} \right) \times \left(\frac{100 - 10}{100} \right) \times 100 \right]$$

$$= 100 - \frac{80}{100} \times \frac{80}{100} \times \frac{90}{100} \times 100$$

$$= 100 - 57.60 = 42.40$$

42. (2) Using Rule 5,

Single equivalent discount

$$= \left(10 + 10 - \frac{10 \times 10}{100} \right) \% = 19\%$$

43. (4) Single equivalent discount for 20% and 15%

$$= \left(20 + 15 - \frac{20 \times 15}{100} \right) \% = 32\%$$

Single equivalent discount for 32% and 10%

$$= \left(32 + 10 - \frac{32 \times 10}{100} \right) \% = 38.8\%$$

Aliter : Using Rule 4,

Here, $D_1 = 20\%$, $D_2 = 15\%$,
 $D_3 = 10\%$

Single equivalent discount

$$= 100 - \left[\left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right) \left(\frac{100 - D_3}{100} \right) \times 100 \right]$$

$$= 100 - \left[\left(\frac{100 - 20}{100} \right) \left(\frac{100 - 15}{100} \right) \left(\frac{100 - 10}{100} \right) \times 100 \right]$$

$$= 100 - \frac{80}{100} \times \frac{85}{100} \times \frac{90}{100} \times 100$$

$$= 100 - 61.20 = 38.80\%$$

44. (2) Single equivalent discount for 20% and 10%

$$= \left(20 + 10 - \frac{20 \times 10}{100} \right) \% = 28\%$$

Single equivalent discount for 28% and 5%

$$= \left(28 + 5 - \frac{28 \times 5}{100} \right) \% = 31.6\%$$

Aliter : Using Rule 4,

Here, $D_1 = 20\%$, $D_2 = 10\%$,
 $D_3 = 5\%$

Single equivalent discount

$$= 100 - \left[\left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right) \left(\frac{100 - D_3}{100} \right) \times 100 \right]$$

$$= 100 - \left[\left(\frac{100 - 20}{100} \right) \left(\frac{100 - 10}{100} \right) \left(\frac{100 - 5}{100} \right) \times 100 \right]$$

$$= 100 - \frac{80}{100} \times \frac{90}{100} \times \frac{95}{100} \times 100$$

$$= 100 - 68.40 = 31.60\%$$

45. (3) Single equivalent discount

$$= \left(p + q - \frac{pq}{100} \right) \%$$

46. (1) Single equivalent discount

$$= \left(25 + 10 - \frac{25 \times 10}{100} \right) = 32.5\%$$

\therefore S.P. of chair

$$= \frac{350(100 - 32.5)}{100}$$

$$= \frac{350 \times 67.5}{100} = ₹ 236.25$$

Aliter : Using Rule 3,

Here, M.P. = ₹ 350,
 $D_1 = 25\%$, $D_2 = 10\%$

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$= 350 \times \left(\frac{100 - 25}{100} \right) \left(\frac{100 - 10}{100} \right)$$

$$= 350 \times \frac{75}{100} \times \frac{90}{100} = ₹ 236.25$$

47. (4) Single equivalent discount

$$= \left(30 + 15 - \frac{30 \times 15}{100} \right) \% = 40.5\%$$

If the marked price be x , then

$$x \times \frac{100 - 40.5}{100} = 476$$

$$\Rightarrow x = \frac{476 \times 100}{59.5} = ₹ 800$$

Aliter :

Here, S.P. = Rs. 476, $D_1 = 30\%$,
 $D_2 = 15\%$

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$476 = \text{M.P.} \left(\frac{100 - 30}{100} \right) \left(\frac{100 - 15}{100} \right)$$

$$\text{M.P.} = \frac{4760000}{70 \times 85}$$

$$\text{M.P.} = ₹ 800$$

48. (1) Using Rule 5,

Single equivalent discount

$$= \left(25 + 5 - \frac{25 \times 5}{100} \right) \%$$

$$= (30 - 1.25)\% = 28.75\%$$

49. (1) Using Rule 5,

C.P. of the table

$$= 800 \times \frac{90}{100} \times \frac{85}{100} = ₹ 612$$

$$\text{Actual C.P.} = 612 + 13 = ₹ 625$$

$$\text{Profit} = 875 - 625 = ₹ 250$$

\therefore Profit per cent

$$= \frac{250}{625} \times 100 = 40\%$$

50. (4) Using Rule 5,

Single equivalent discount

$$= \left(30 + 30 - \frac{30 \times 30}{100} \right) \% = 51\%$$

51. (2) Using Rule 5,

Single equivalent discount

$$= \left(25 + 15 - \frac{25 \times 15}{100} \right)$$

$$= 40 - 3.75 = 36.25$$

DISCOUNT

∴ C.P. for the retailer

$$= \frac{800 \times (100 - 36.25)}{100} = ₹ 510$$

52. (1) First discount

$$= 320 \times \frac{10}{100} = ₹ 32$$

∴ Price after first discount

$$= 320 - 32 = ₹ 288$$

If the second discount be $x\%$, then

$$\therefore \frac{288 \times x}{100} = 288 - 244.80$$

$$= 43.2$$

$$\Rightarrow x = \frac{43.2 \times 100}{288} = 15\%$$

Aliter : Using Rule 3,
Here, M.P. = Rs. 320, S.P. = Rs. 244.80, $D_1 = 10\%$, $D_2 = ?$

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$244.80 = 320 \left(\frac{100 - 10}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$\frac{2448000}{320 \times 90} = 100 - D_2$$

$$100 - D_2 = 85$$

$$D_2 = 100 - 85$$

$$D_2 = 15\%$$

53. (1) Using Rule 5,

Single equivalent discount for 40% and 10%

$$= \left(40 + 10 - \frac{40 \times 10}{100} \right) \% = 46\%$$

Difference of percentage = 4%

∴ Savings = 4% of 10000

$$= \frac{10000 \times 4}{100} = ₹ 400$$

54. (2) Using Rule 5,

Single equivalent discount

$$= \left(70 + 30 - \frac{70 \times 30}{100} \right) \%$$

$$= (100 - 21)\% = 79\%$$

After a discount of 70%, remaining price is just 30. On this 30%, another discount of 30% is given which will be equal to 9 so, total discount = 70% + 9% = 79%.

55. (3) Using Rule 5,

C.P. for A

$$= 3000 \times \frac{90}{100} \times \frac{85}{100} = ₹ 2295$$

Actual C.P. = 2295 + 105

$$= ₹ 2400$$

$$\therefore \text{Gain per cent} = \frac{800}{2400} \times 100$$

$$= \frac{100}{3} = 33\frac{1}{3}\%$$

56. (1) Using Rule 5,

Single equivalent discount

$$= \left(20 + 10 - \frac{20 \times 10}{100} \right) = 28\%$$

$$\therefore \text{C.P. of table} = \frac{1500 \times 72}{100}$$

$$= ₹ 1080$$

Actual C.P. = 1080 + 20 = ₹ 1100

∴ Required S.P.

$$= 1100 \times \frac{120}{100} = ₹ 1320$$

57. (1) Single equivalent discount

$$= \left(5 + 5 - \frac{25}{100} \right) \%$$

$$= 9\frac{3}{4} = \frac{39}{4} \%$$

$$\therefore \text{S.P.} = 80 \times \frac{361}{400} = ₹ 72.2$$

Aliter : Using Rule 3,

Here, M.P. = ₹ 80, $D_1 = 5\%$,

$D_2 = 5\%$, S.P. = ?

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$\text{S.P.} = 80 \left(\frac{100 - 5}{100} \right) \left(\frac{100 - 5}{100} \right)$$

$$= 80 \times \frac{95}{100} \times \frac{95}{100} = ₹ 72.2$$

58. (2) (a) Single equivalent discount for 20% and 15%

$$= \left(20 + 15 - \frac{20 \times 15}{100} \right) \% = 32\%$$

Single equivalent discount for 32% and 10%

$$= \left(32 + 10 - \frac{32 \times 10}{100} \right) = 38.8\%$$

(b) Single equivalent discount for 25% and 12%

$$= \left(25 + 12 - \frac{25 \times 12}{100} \right) = 34\%$$

Single equivalent discount for 34% and 8%

$$= \left(34 + 8 - \frac{34 \times 8}{100} \right) \%$$

$$= 42 - 2.72 = 39.28\%$$

Aliter : Using Rule 4,

Case I. $D_1 = 20\%$,

$D_2 = 15\%$, $D_3 = 10\%$

Equivalent discount

$$= 100 - \left[\left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right) \left(\frac{100 - D_3}{100} \right) \times 100 \right]$$

$$= \left(\frac{10 \times 10}{100} \right) \% = 1 \%$$

Aliter : Using Rule 8,

Here, $r = 10\%$ and $r_1 = 10\%$

\Rightarrow Required profit or loss

$$= \frac{r \times (100 - r_1)}{100} - r_1$$

$$= \frac{10 \times (100 - 10)}{100} - 10$$

$$= 9 - 10$$

$$= -1\% \text{ (-ve sign shows loss)}$$

$$= 1\% \text{ loss}$$

2. (2) Suppose C.P. = 100

On 20% above S.P. = 120

On discount of 8%

$$= 120 - 120 \times \frac{8}{100}$$

$$= 120 - \frac{48}{5} = 120 - 9.6 = 110.4$$

$$\text{Gain} = 110.4 - 100 = 10.4 \%$$

Aliter : Using Rule 8,

Here, $r = 20\%$, $r_1 = 8\%$

Profit or loss

$$= \frac{r \times (100 - r_1)}{100} - r_1$$

$$= \frac{r \times (100 - r_1)}{100} - r_1$$

$$= \frac{20 \times (100 - 30)}{100} - 30$$

$$= 14 - 30 = -16 \%$$

$$= 16\% \text{ loss}$$

4. (4) Gain % = $20 - 10 - \frac{20 \times 10}{100}$

$$= 20 - 12 = 8 \%$$

Aliter : Using Rule 8,

Here, $r = 20\%$, $r_1 = 10\%$

Profit or loss

$$= \frac{r \times (100 - r_1)}{100} - r_1$$

$$= \frac{20 \times (100 - 10)}{100} - 10$$

$$= 18 - 10 = 8\% \text{ profit.}$$

5. (2) Let C.P. be 100

Marked price = 110

$$\therefore x\% \text{ of } 110 = 11$$

$$\Rightarrow x = \frac{11 \times 100}{110} = 10 \%$$

Aliter : Using Rule 8,

Here, loss % = 1%, $r = 10\%$, r_1

$$\text{loss \%} = \frac{r \times (100 - r_1)}{100} - r_1$$

$$-1 = \frac{100 \times (100 - x)}{100} - x$$

(-ve sign for loss)

$$+110x = 1100$$

$$x = 10 \%$$

$$\Rightarrow x = \frac{250 \times 92}{115} = ₹ 200$$

Aliter : Using Rule 6,

Here, $r = 15\%$, $D = 8\%$,

M.P. = ₹ 250, C.P. = ?

$$\frac{\text{M.P.}}{\text{C.P.}} = \frac{100 + r}{100 - D}$$

$$\frac{250}{\text{C.P.}} = \frac{100 + 15}{100 - 8}$$

$$\text{C.P.} = \frac{250 \times 92}{115}$$

$$\text{C.P.} = ₹ 200$$

38. (3) Greatest possible original price will be when discount be maximum

If the price be Rs. x , then

$$\frac{75}{100} \text{ of } x = 270$$

$$\Rightarrow x = \frac{270 \times 100}{75} = \text{Rs. } 360$$

39. (3) C.P. of article = Rs. x (let)
According to the question,

$$x \times \frac{120}{100} = \frac{40 \times 90}{100}$$

$$\Rightarrow x = \frac{40 \times 90}{120} = \text{Rs. } 30$$

Aliter : Using Rule 6,

Here, $D = 10\%$, $r = 20\%$,

M.P. = Rs. 40, C.P. = ?

$$\frac{\text{M.P.}}{\text{C.P.}} = \frac{100 + r}{100 - D}$$

$$\frac{40}{\text{C.P.}} = \frac{100 + 20}{100 - 10}$$

$$\text{C.P.} = \frac{40 \times 90}{120}$$

$$\text{C.P.} = \text{Rs. } 30$$

40. (1) Let the C.P. of article be Rs. x and its marked price be Rs. y .
According to the question,
90% of $y = 112\%$ of x
 $\Rightarrow 90 \times y = 112 \times x$

$$\Rightarrow \frac{x}{y} = \frac{90}{112} = 45 : 56$$

41. (4) Let the marked price of article be Rs. x .

According to the question,

$$\left(100 - \frac{50}{3}\right)\% \text{ of } x = 450$$

$$\Rightarrow x \times \left(\frac{300 - 50}{3}\right)\% = 450$$

$$\Rightarrow x \times \frac{250}{300} = 450$$

$$\Rightarrow x \times \frac{5}{6} = 450$$

$$\Rightarrow x = \frac{450 \times 6}{5} = \text{Rs. } 540$$

42. (3) Let the marked price of article be Rs. x .

According to the question,

90% of $x = 120\%$ of 1900

$$\Rightarrow x \times \frac{90}{100} = \frac{900 \times 120}{100}$$

$$\Rightarrow x = \frac{900 \times 120}{90} = \text{Rs. } 1200$$

TYPE-IV

1. (3) Suppose printed price = ₹ 100
 \therefore S.P. = ₹ $(100 - 2.5) = ₹ 97.5$

$$\therefore \text{Marked Price} = \frac{100 \times 39}{97.5}$$

$$= ₹ 40$$

2. (3) Printed price = ₹ 900
On 40% discount

$$= 900 - \frac{900 \times 40}{100} = 900 - 360$$

$$\text{C.P. for retailer} = 540$$

$$\text{S.P.} = 900$$

$$\text{Profit} = 900 - 540 = 360$$

$$\text{Gain \%} = \frac{360 \times 100}{540}$$

$$= \frac{200}{3} = 66\frac{2}{3}\%$$

3. (2) Let the marked price of each pen be x
Total cost price of 40 pens = Total

marked price of 36 pens = $36x$
Selling price of 1 pen after 1% discount = $(1 - 0.01)x = 0.99x$
Selling price of 40 pens
 $= 40 \times 0.99x = 39.6x$

$$\text{Profit} = \frac{39.6 - 36}{36} \times 100$$

$$= \frac{3.6}{36} \times 100 = 10\%$$

4. (1) First discount = 20%
Price after first discount

$$= ₹ \left(1500 - \frac{20}{100} \times 1500\right)$$

$$= ₹ (1500 - 300) = ₹ 1200$$

Let the additional discount be $x\%$

$$\therefore \left(1200 - \frac{x \times 1200}{100}\right) = 1104$$

$$\Rightarrow 1200 - 12x = 1104$$

$$\Rightarrow 12x = 1200 - 1104 = 96$$

$$\Rightarrow x = \frac{96}{12} = 8\%$$

5. (3) Let the printed price of the article be ₹ 100

Discount = 40%

$$\text{C.P.} = ₹ (100 - 40) = ₹ 60$$

$$\text{S.P.} = ₹ 100$$

$$\therefore \text{Gain \%} = \frac{40}{60} \times 100$$

$$= \frac{200}{3} = 66\frac{2}{3}\%$$

6. (4) Discount

$$= 120 \times \frac{40}{100} = ₹ 48$$

$$\therefore \text{S.P.} = ₹ (120 - 48) = ₹ 72$$

$$\text{Loss} = 80 - 72 = ₹ 8$$

$$\therefore \text{Loss \%} = \frac{8}{80} \times 100 = 10\%$$

Aliter : Using Rule 6,

Here, C.P. = Rs. 80, M.P. =

Rs. 120, $D = 40\%$

$$\frac{\text{M.P.}}{\text{C.P.}} = \frac{100 + r}{100 - D}$$

$$\frac{120}{80} = \frac{100 + r}{100 - 40}$$

$$\frac{3}{2} = \frac{100 + r}{60}$$

$$90 = 100 + r$$

$$r = -10\% \text{ (-ve sign shows loss)}$$

$$\Rightarrow \text{Loss} = 10\%$$

7. (1) Let the marked price be x
 $\therefore 86\%$ of $x = 387$

$$\therefore x = \frac{387 \times 100}{86} = ₹ 450$$

Aliter : Using Rule 2,
 Here, $D = 14\%$, $S.P. = ₹ 387$,
 $M.P. = ?$

$$\begin{aligned} M.P. &= \frac{S.P. \times 100}{100 - D} \\ &= \frac{387 \times 100}{100 - 14} \\ &= \frac{38700}{86} = ₹ 450 \end{aligned}$$

8. (4) C.P. = ₹ 900
 Gain = 10%

$$\therefore S.P. = ₹ \left(\frac{110}{100} \times 900 \right) = ₹ 990$$

Let the marked price be x .

$$\therefore \frac{90}{100}x = 990$$

$$\therefore x = \frac{990 \times 100}{90} = ₹ 1100$$

Aliter : Using Rule 6,
 Here, $D = 10\%$, C.P. = ₹ 900,
 $R = 10\%$, $M.P. = ?$

$$\frac{M.P.}{C.P.} = \frac{100 + r}{100 - D}$$

$$\frac{M.P.}{900} = \frac{100 + 10}{100 - 10}$$

$$M.P. = \frac{110}{90} \times 900$$

$$M.P. = ₹ 1100$$

9. (3) Let the C.P. of each article be ₹ 1

For 15 books, the tradesman gives 1 book free.

$$\therefore \text{C.P. of 15 books} = ₹ 16$$

$$\therefore \text{S.P. of 15 books}$$

$$= 16 \times \frac{135}{100} = ₹ \frac{108}{5}$$

$$\therefore \text{S.P. of 1 book} = \frac{108}{5 \times 15}$$

$$= ₹ \frac{36}{25}$$

$$\text{Now, } 96\% \text{ of marked price} = \frac{36}{25}$$

$$\therefore \text{Marked price} = \frac{36 \times 100}{25 \times 96} = \frac{3}{2}$$

$$= ₹ 1.5$$

$$\therefore \text{The required \% increase}$$

$$= \frac{0.5}{1} \times 100 = 50\%$$

10. (3) Discount on ₹ 36000

$$= \frac{36000 \times 7}{100} = ₹ 2520$$

Discount on first ₹ 20,000

$$= \frac{20000 \times 8}{100} = ₹ 1600$$

Discount on next ₹ 10,000

$$= \frac{10,000 \times 5}{100} = ₹ 500$$

$$\therefore \text{Discount on remaining ₹ 6,000}$$

$$= 2520 - (1600 + 500) = ₹ 420$$

\therefore Required percent

$$= \frac{420 \times 100}{6000} = 7\%$$

11. (1) Let the C.P. be ₹ 100

$$\therefore \text{Marked price} = ₹ 125$$

$$S.P. = 8\% \text{ of } 125$$

$$= \frac{84 \times 125}{100} = ₹ 105$$

$$\therefore \text{Profit} = ₹ (105 - 100) = ₹ 5$$

$$\therefore \text{Profit \%} = 5\%$$

12. (1) Let the marked price of the shirt be Rs. x .

According to the question,

$$x \times \frac{20}{100} = 150$$

$$\Rightarrow x = \frac{150 \times 100}{20} = 750$$

$$\therefore \text{Price paid} = ₹ (750 - 150)$$

$$= ₹ 600$$

13. (3) CP of the article for Ravi

$$= 660 \times \frac{100}{110} = ₹ 600$$

Ravi bought the article at the discount of 25%

$$\therefore 75\% \text{ of marked price} = ₹ 600$$

$$\text{Marked price} = \frac{600 \times 100}{75} = ₹ 800$$

14. (1) Let the marked price of the article be x .

Equivalent discount for successive discounts of 30% and 20%

$$= \left(30 + 20 - \frac{30 \times 20}{100} \right) \%$$

$$= (50 - 6)\% = 44\%$$

$$\Rightarrow (100 - 44)\% \text{ of } x = 2240$$

$$\Rightarrow \frac{x \times 56}{100} = 2240$$

$$\Rightarrow x = \frac{2240 \times 100}{56} = ₹ 4000$$

15. (4) Let the market price of the cooler be x ,

According to the question,
 $(12 - 10)\%$ of $x = 35$

16. (1) Let the CP of article be x and its marked price be y .

According to the question,
 90% of $y = 115\%$ of x

$$\Rightarrow \frac{y \times 90}{100} = \frac{x \times 115}{100}$$

$$\Rightarrow \frac{x}{y} = \frac{90}{115} = \frac{18}{23} \Rightarrow 18:23$$

Aliter : Using Rule 6,
 Here, $r = 15\%$, $D = 10\%$

$$\frac{M.P.}{C.P.} = \frac{100 + r}{100 - D}$$

$$= \frac{100 + 15}{100 - 10}$$

$$\frac{M.P.}{C.P.} = \frac{115}{90}$$

$$\frac{C.P.}{M.P.} = \frac{90}{115}$$

$$\frac{C.P.}{M.P.} = \frac{18}{23}$$

Aliter : Using Rule 1,

Here, M.P. = ₹ 650

S.P. = ₹ 572

$$\text{Discount \%} = \frac{\text{M.P.} - \text{S.P.}}{\text{M.P.}} \times 100$$

$$= \frac{650 - 572}{650} \times 100$$

$$= \frac{7800}{650} = 12\%$$

20. (1) Let marked price of article = ₹ 100

∴ C.P. of article = ₹ 64

21. (3) Let the marked price of watch be x .

$$\therefore \frac{x \times 95}{100} - \frac{x \times 94}{100} = 15$$

$$\Rightarrow x = 15 \times 100 = ₹ 1500$$

22. (3) Discount = 15%

SP of racket = 85% of ₹ 30

One shuttle cock of ₹ 1.50 is free.

∴ Actual SP

$$\frac{2x}{x} = \frac{100 + 15}{100 - D}$$

$$200 - 2D = 115$$

$$2D = 85$$

$$D = 42.5 \%$$

DISCOUNT

43. (2) Discount = 270 - 237.60
= Rs. 32.4

If the rate of discount be $x\%$, then

$$270 \times \frac{x}{100} = 32.4$$

$$\Rightarrow x = \frac{32.4 \times 100}{270} = 12\%$$

Aliter : Using Rule 1,
Here, S.P. = Rs. 237.60,
M.P. = Rs. 270
Discount %

$$= \frac{\text{M.P.} - \text{S.P.}}{\text{M.P.}} \times 100\%$$

$$= \frac{270 - 237.60}{270} \times 100\%$$

$$= \frac{32.40 \times 100}{270} \%$$

$$= 12\%$$

44. (2) Let the marked price of article be Rs. x

According to the question,

$$\frac{x \times 75}{100} = \frac{1440 \times 125}{100}$$

$$\Rightarrow x = \frac{1440 \times 125}{75} = \text{Rs. } 2400$$

Aliter : Using Rule 6,
Here, $D = 25\%$, $r = 25\%$, C.P.

$$\frac{\text{M.P.}}{\text{C.P.}} = \frac{100 + r}{100 - D}$$

$$\frac{\text{M.P.}}{1440} = \frac{100 + 25}{100 - 25}$$

$$\text{M.P.} = \frac{125 \times 1440}{75}$$

$$= \text{Rs. } 2400$$

45. (4) Marked price = Rs. 720

Discount = 10%

\therefore After a discount of 10%,

$$\text{S.P.} = \text{Rs. } \left(\frac{720 \times 90}{100} \right)$$

$$= \text{Rs. } 648$$

Final S.P. = Rs. 550.80

\therefore Discount = Rs. (648 - 550.80)

= Rs. 97.2

If the second discount be $x\%$, then

$$\frac{648 \times x}{100} = 97.2$$

$$\Rightarrow x = \frac{97.2 \times 100}{648} = 15\%$$

Aliter : Using Rule 3,

S.P. = Rs. 550.80, M.P. = Rs. 720

$D_1 = 10\%$, $D_2 = ?$

$$\text{S.P.} = \text{M.P.} \left(\frac{100 - D_1}{100} \right) \left(\frac{100 - D_2}{100} \right)$$

$$\frac{550.80 \times 100 \times 100}{720 \times 90}$$

$$= 100 - D_2$$

$$85 = 100 - D_2$$

$$D_2 = 100 - 85$$

$$D_2 = 15\%$$

46. (3) C.P. of article = Rs. x (let).

According to the question,

$$\frac{x \times 75}{100} = 3600$$

$$\Rightarrow x = \frac{3600 \times 100}{75} = \text{Rs. } 4800$$

$$\text{M.P.} = \frac{360000}{75}$$

$$= \text{M.P.} = \text{Rs. } 4800$$

47. (2) Rate of discount = 12%

\therefore S.P. of TV set

$$= 6500 \times (100 - 12)\%$$

$$\text{M.P.} = \frac{\text{S.P.} \times 100}{100 - D}$$

$$6500 = \frac{\text{S.P.} \times 100}{100 - 12}$$

$$\text{S.P.} = \frac{6500 \times 88}{100}$$

$$\text{S.P.} = \text{Rs. } 5720$$

48. (2) S.P. of TV set

$$= \text{Rs. } \left(\frac{120}{20} \times 750 \right)$$

51. (2) Marked price = Rs. 250

S.P. = Rs. 225

Discount = 250 - 225 = Rs. 25

If the rate of discount be $x\%$, then

$$\frac{250 \times x}{100} = 25$$

$$\Rightarrow x = \frac{25 \times 100}{250} = 10\%$$

Here, $r = 30\%$

$r_1 = 10\%$

Profit % =

Therefore, 15% of 80 and 20% of 60 are same. Hence the cost prices should be ₹ 80 and ₹ 60.

2. (3) Let the salesman's total sales be ₹ (10000 + x)

According to the question,

$$10000 \times \frac{11}{2}\% + x \times 6\% = 1990$$

$$\Rightarrow 5000 \times 11\% + 6x\% = 1990$$

$$\Rightarrow 5000 \times 11 + 6x = 199000$$

$$\Rightarrow 6x = 199000 - 55000$$

$$\Rightarrow 6x = 144000$$

$$\Rightarrow x = \frac{144000}{6} = 24000$$

$$\text{S.P. of remaining } \frac{1}{4} \text{ stock}$$

$$= (60\% \text{ of } 120) \times \frac{1}{4} = ₹ 18$$

$$\text{Let } x\% \text{ of } 1200 = 96$$

Repairs cost = ₹ 1000

$$\therefore \text{Actual CP} = 19000 + 1000$$

$$= ₹ 20000$$

$$\text{SP} = ₹ 25000$$

$$\text{Profit} = 25000 - 20000 = ₹ 5000$$

$$\Rightarrow x = \frac{125 \times 100}{75} = ₹ \frac{500}{3}$$

$$\text{S.P. after a discount of } 10\%$$

$$= \frac{500}{3} \times \frac{90}{100} = ₹ 150$$

$$\therefore \text{Gain per cent} = 50\%$$

Aliter : Using Rule 6,

$$\text{Here, } r = 25\%, D = 25\%.$$

$$\frac{\text{M.P.}}{\text{C.P.}} = \frac{100 + 25}{100 - 25}$$

$$\frac{\text{M.P.}}{\text{C.P.}} = \frac{125}{75} = \frac{5}{3}$$

$$\text{Now, } D = 10\%$$

$$\text{Profit} = ?$$

$$\frac{\text{M.P.}}{\text{C.P.}} = \frac{100 + r}{100 - D}$$

$$\frac{5}{3} = \frac{100 + r}{100 - 10}$$

$$100 + r = \frac{5}{3} \times 90$$

$$r = 150 - 100$$

$$r = 50\%$$

Aliter : Using Rule 1.

$$\text{M.P.} = ₹ 60$$

$$\text{S.P.} = ₹ 45$$

$$\text{Discount \%} = \frac{\text{M.P.} - \text{S.P.}}{\text{M.P.}} \times 100$$

If the rate of discount be $x\%$, then

$$\frac{300 \times x}{100} = 25.50$$

$$\Rightarrow 300x = 25.50 \times 100$$

$$\Rightarrow x = \frac{25.50 \times 100}{300} = 8.5\%$$

Aliter : Using Rule 1,

S.P. = Rs. 244.50

Discount%

$$= \left(\frac{\text{M.P.} - \text{S.P.}}{\text{M.P.}} \right) \times 100\%$$

EXPLANATIONS

1. (1) Let the marked price be ₹ x .

$$\therefore \frac{95x}{100} = 712.50 \times \frac{400}{300}$$

$$\Rightarrow \frac{95x}{100} = \frac{712.5 \times 4}{3}$$

$$\Rightarrow x = \frac{712.5 \times 4 \times 100}{3 \times 95} = ₹ 1000$$

2. (3) Final amount after giving successive discounts of 25% and 10%

$$= 600 \times 0.75 \times 0.9 = ₹ 405$$

3. (3) According to question, SP of bicycle = $100 \times 0.9 \times 0.85 = ₹ 76.50$

4. (4) SP = 17940, Discount = 8%

$$\therefore \text{MP} = \frac{17940}{0.92} = ₹ 19500$$

$$\therefore \text{Gain} = 19.6\% \text{ (given)}$$

$$\therefore \text{CP} = \frac{17940}{1.196} = ₹ 15000$$

$$\text{New SP without discount} = ₹ 19500$$

$$\text{Gain} = (19500 - 15000) = ₹ 4500$$

$$\therefore \text{Gain per cent} = \frac{4500}{15000} \times 100 = 30\%$$

5. (1) By question, original price of 250 chairs

$$= 250 \times 50 = ₹ 12500$$

Price after discount

$$= 12500 \times \frac{80}{100} \times \frac{85}{100} \times \frac{95}{100} = ₹ 8075$$

6. (2) By question, Profit per cent or loss per cent.

$$= +25 - 12 - \frac{25 \times 12}{100} = +10\%$$

As the sign is +ve so, there is a profit of 10%.

7. (3) According to question, selling price of first shopkeeper.

$$= 700 \times \frac{70}{100} \times \frac{94}{100} = ₹ 460.60$$

Selling price of second shopkeeper

$$= 700 \times \frac{80}{100} \times \frac{84}{100} = ₹ 470.40$$

Required difference

$$= 470.40 - 460.60 = ₹ 9.80$$

$$\frac{1}{16} \times 100 = 6.25\%$$

Overall discount

$$= -4 - 6.25 + \frac{4 \times 6.25}{100} = -10\%$$

Let cost price = ₹ 100, then

selling price = ₹ 135

So, 90% of marked price = 135

$$\text{Marked price} = \frac{135 \times 100}{90} = ₹ 150$$

Marked price is increased by

$$= \frac{150 - 100}{100} \times 100 = 50\%$$

9. (4) Let cost price = ₹ 100

Marked price = ₹ 150

\therefore Discount per cent

$$= \frac{50}{150} \times 100 = 33.33\%$$

10. (1) Let the other discount be $x\%$.

$$65 \times \frac{90}{100} \times \frac{(100 - x)}{100} = 56.16$$

$$\Rightarrow 100 - x = \frac{56.16 \times 100 \times 100}{65 \times 90}$$

$$\Rightarrow 100 - x = 96$$

$$\Rightarrow x = 4\%$$
